

the B.A. and B.S. with Environmental Ethics and Environmental Policy Analysis courses. Courses in Biology; Earth and Environmental Sciences, Environmental Studies; Management, Business, and Economics; Mathematics; and Study Away constitute the major requirements for each degree.

INTERNSHIPS/RESEARCH

A career as a sustainability manager requires an individual to be very comfortable with public speaking as well as interpersonal communication. A manager of any sort, especially a sustainability manager, must also have the necessary leadership skills to effectively supervise and guide a multitude of staff and stakeholders. Such skills sharpen through internships as well as conducting research. Internships and research opportunities are available for students in each degree. For more information, contact the Sustainability Center at 520-755-2200 or visit www.azstate.edu/sustainability.
